Sequence 10, Application US/09359382

Patent No. 6306397

GENERAL INFORNATION:

APPLICANT: EDWARDS, Stirling John

APPLICANT: COX, John Cooper

APPLICANT: WEBB, Ilizabeth Ann

APPLICANT: WEBB, Ilizabeth Ann

APPLICANT: FRAZER, Ian

TITLE OF INVENTION: VARIANTS OF HUMAN PAPILLOMA VIRUS ANTIGENS

FILE REFERENCE: 017227/0148

CURRENT FILING DATE: 1999-07-23

EARLIER APPLICATION NUMBER: US 08/860,165

EARLIER FILING DATE: 1997-09-22

EARLIER FILING DATE: 1997-09-22

EARLIER FILING DATE: 1997-09-22

EARLIER FILING DATE: 1994-12-20

MUMBER OF SEQ ID NOS: 27

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 6, Application US/10888384

Publication No. US20050033025A1

GRERAL INFORMATION:

APPLICANT: GROPPIN, JEANNINE

APPLICANT: GUILET, JEAN-GERAED

APPLICANT: GUINERINO: POLYEPITOPIC PROTEIN FRAGMENTS OF THE E6 PROTEIN

TITLE OF INVENTION: PARTICULARLY IN VACCINATION

TITLE OF INVENTION: PARTICULARLY IN VACCINATION

TITLE OF INVENTION: PARTICULARLY IN VACCINATION

CURRENT APPLICATION NUMBER: US/10/858,384

CURRENT FILING DATE: 2004-06-02

PRIOR FILING DATE: 1990-06-03

NUMBER OF SEQ ID NOS: 24

SOUTWARE: PATENTIN VET. 3.2
APPLICANT: SASTRY, K. JAGANNADHA
APPLICANT: SASTRY, K. JAGANNADHA
APPLICANT: TORTOLERO-LUNA, GUILLERMO
APPLICANT: FOLLEN, MICHELE
TITLE OF INVENTION: METHODS AND COMPOSITIONS RELATING TO HPV-ASSOCIATED
TITLE OF INVENTION: PRE-CANCEROUS AND CANCEROUS GROWTHS, INCLUDING CIN

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 14, 7

SSULT 1 5-08-159-339A-246	Sequence 246, Application US/08159339A	Patent No. 6037135	GENERAL INFORMATION:	APPLICANT: Kubo, Ralph T.	APPLICANT: Grey, Howard M.	APPLICANT: Sette, Alessandro	APPLICANT: Celis, Esteban	TITLE OF INVENTION: HLA Binding peptides an	TITLE OF INVENTION: Uses	NUMBER OF SEQUENCES: 1254	CORRESPONDENCE ADDRESS:

ALIGNMENTS

NAKESPONDENCE ADDRESS:
ADDRESSEE: Townsend and Townsend and Crew LLP
STEBT: Two Embarcadero Center, Eighth Floor
CITY: San Francisco

INFORMATION FOR SEQ ID NO: SEQUENCE CHARACTERISTICS: LENGTH: 9 amino acids

```

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         셤
Sequence 4, Application US/08316239B

Patent No. 5679509

GENERAL INFORMATION:
APPLICANT: Wheeler, Cosette M.
APPLICANT: Wheeler, Cheryl A.
TITLE OF INVENTION: Distinguishing a Subset of HPV that is Associated with an TITLE OF INVENTION: Increased Risk of Developing Cervical Dysplasia and TITLE OF INVENTION: Cervical Cancer
NUMBER OF SUGURNCES: 4
CORRESPONDENCE ADDRESS:
ADDRESSES: Aggliani & Associates
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

Patent No. 5679509
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Wheeler, Cosette M.
APPLICANT: Parmenter, Cheryl A.
TITLE OF INVENTION: Methods and a Diagnostic Aid for
TITLE OF INVENTION: Distinguishing a Subset of HPV that is Associated with an TITLE OF INVENTION: Increased Risk of Developing Cervical Dysplasia and TITLE OF INVENTION: Cervical Cancer
NUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS:
                                                                                    ö

Patent No. 6306397

GENERAL INFORMATION:
APPLICANT: EDWARDS, Stirling John
APPLICANT: WEBB. Elizabeth Ann
APPLICANT: WEBB. Elizabeth Ann
APPLICANT: WEBB. Elizabeth Ann
APPLICANT: WEBB. Elizabeth Ann
TITLE OF INVENTION: VARIANTS OF HUMAN PAPLILLOMA VIRUS ANTIGENS
FILE REFERENCE: 017227/0148
CURRENT APPLICATION: VARIANTS OF HUMAN PAPLILLOMA VIRUS ANTIGENS
FILE REFERENCE: 099-07-23
FEARLIER FILING DATE: 1999-07-23
EARLIER FILING DATE: 1999-07-23
EARLIER APPLICATION NUMBER: PCT/AU95/00868
EARLIER APPLICATION NUMBER: PCT/AU95/00868
EARLIER RELING DATE: 1994-12-20
EARLIER RELING DATE: 1994-12-20
EARLIER FILING DATE: 1994-12-20
EARLIER FILING DATE: 1994-12-20
EARLIER FILING DATE: 1994-12-20
              APPLICANT: WEB, Elizabeth Ann
APPLICANT: WEB, Elizabeth Ann
